- XI Sizes, Packaging & Loading 23
- XII Contact 24

C O M M E R C I A L

ENGINEERED FOR CONTRACT USE

Six properties carried by every mattress in this catalogue, hotel and medical alike.

I

FLAME RETARDANT ON REQUEST

FR fabric versions tested to EN 597-1 and EN 597-2.
Certificates supplied with every quotation, ready for tender submission.

II

BED BUG RESISTANT

Tight-gauge knitted construction, full-perimeter zip closure and enclosed seams leave no harbourage points along the mattress edge.

III

HYPOALLERGENIC

Engineered against dust mites, bacteria and the allergens associated with asthma and eczema — relevant to both guest rooms and patient wards.

IV

REMOVABLE COVER

Zip-off knitted covers are washable and replaceable. The cover is renewed instead of the mattress, which lowers the cost of each refurbishment cycle.

V

DOUBLE-SIDED DESIGN

Identical comfort on both faces. Rotation is doubled and the effective service life of the mattress extends accordingly.

VI

ROLL-PACKED

Every model in this catalogue ships roll-packed.
Compressed loading raises the unit count per container and reduces freight cost per mattress.

FABRIC & TECHNOLOGY

What the covers are made of, and why the construction holds up under contract use.

I

KNITTED LYOCCELL / POLYESTER

A Lyocell and polyester blend knitted cover: moisture is moved away from the sleeping surface while the polyester content carries the abrasion resistance that contract use demands.

IV

ABSORBENT TOP LAYER

In the medical line an ultra-absorbent face draws liquid down and away from the skin, holding the contact surface dry beneath the patient.

II

FULL-PERIMETER ZIP

The cover opens on a continuous perimeter zip, so it can be removed, laundered and refitted by housekeeping without specialist handling.

V

TENSILE STRENGTH

Load-bearing construction rated for the repeated stress of moving and repositioning bedridden patients, where seam and surface failure normally begins.

III

TPU MEMBRANE LAMINATION

The medical line is built on a four-layer laminated fabric with a thermoplastic polyurethane membrane: a complete fluid barrier that still passes water vapour.

VI

OEKO-TEX CERTIFIED

Fabrics are OEKO-TEX certified: tested for harmful substances and approved for direct and prolonged skin contact.

SOVEREIGN

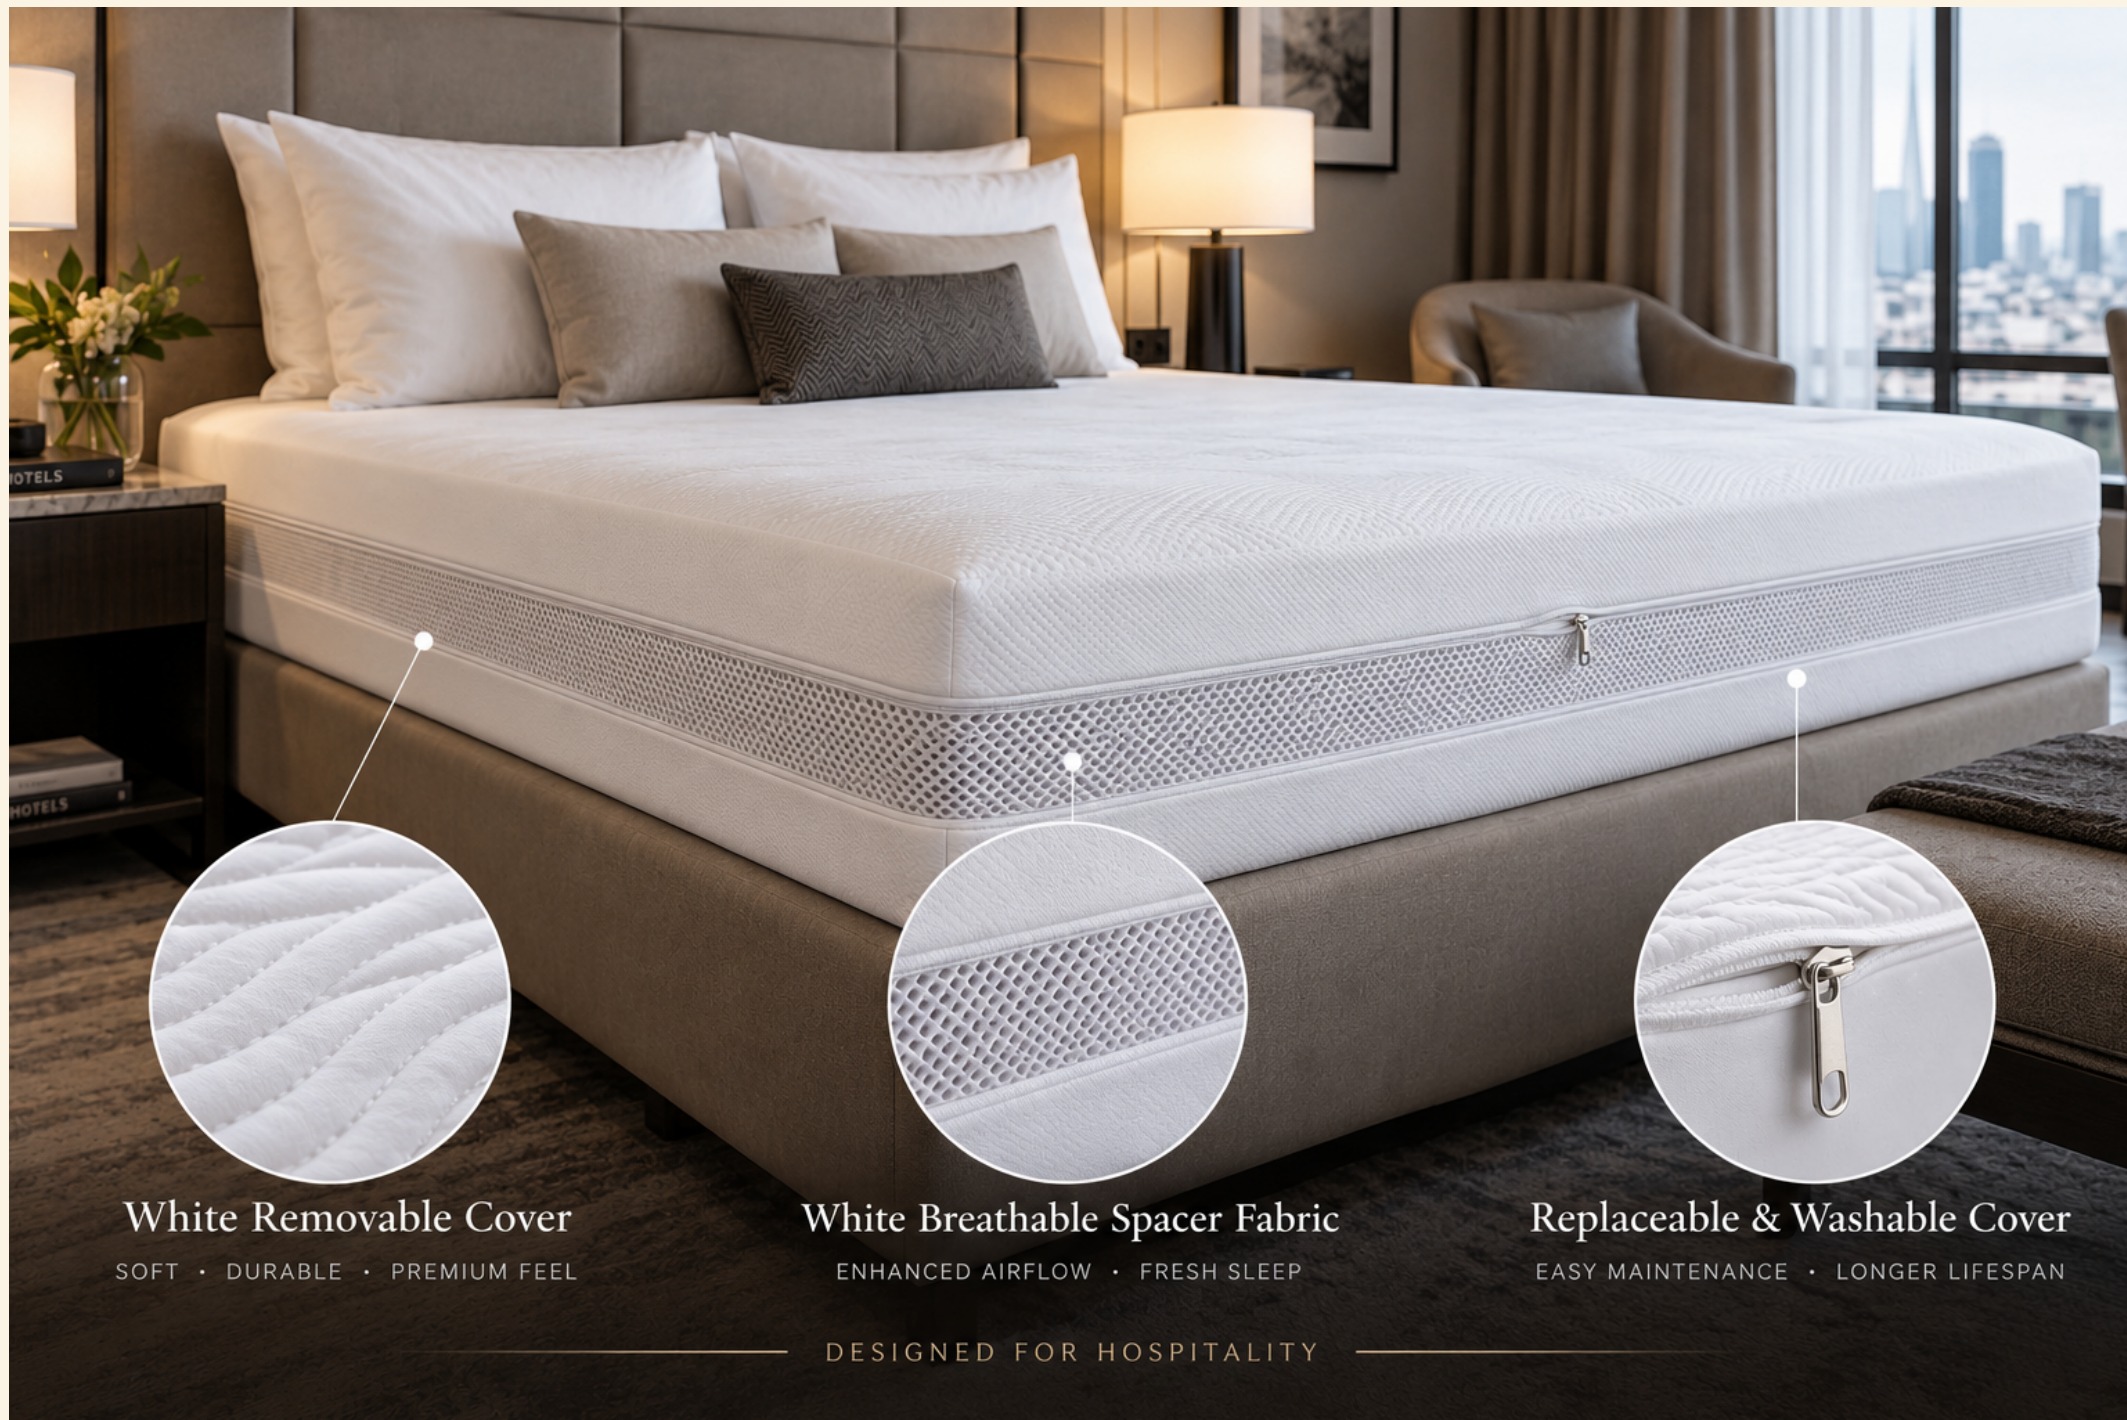

25 CM
REINFORCED EDGE

The flagship of the hotel programme. A 1000-count seven-zone pocket spring unit is enclosed in a reinforced foam frame that runs the full perimeter, so the mattress holds its shape at the edge — the first point to collapse in high-turnover rooms. Suited to four and five star rooms and to suites where the bed is expected to look and feel unchanged after several seasons.

- REINFORCED EDGE
- 1000 POCKET SPRINGS
- 7 ZONES
- DOUBLE-SIDED
- ROLL-PACKED

TECHNICAL SPECIFICATION

Height	25 cm
Spring system	1000 pocket springs — 7 comfort zones
Edge support	Reinforced foam frame, 30 kg/m³
Comfort layer	28 kg/m³ high-density foam
Cover	Removable, washable, full-perimeter zip
Design	Double-sided — identical on both faces
Cover fabric	Knitted Lyocell / Polyester blend
Flame retardant	FR versions on request — EN 597-1 & EN 597-2
Bed bug protection	Bed bug resistant construction
Allergen protection	Hypoallergenic
Certification	OEKO-TEX certified
Sizes	90 / 120 / 140 / 160 / 180 / 200 × 200 cm — custom on request
Packaging	Roll-packed
Minimum order	On request
40'HC loading	On request

Soft, breathable and durable

DOUBLE-SIDED DESIGN
SAME COMFORT ON BOTH SIDES

REMOVABLE & WASHABLE COVER
EASY MAINTENANCE
LONGER LIFESPAN

AMBASSADOR

24 CM
DOUBLE-SIDED

A symmetrical build: the same comfort package above and below the spring unit, so the mattress can be turned as well as rotated. A 1000-count seven-zone pocket spring core sits between felt protection layers and 5 cm high-density comfort foam on each face. The knitted cover lifts off completely on a perimeter zip. The natural specification for large room counts where housekeeping handles maintenance in-house.

METROPOL

20 CM
5 ZONE CNC FOAM

A springless build for projects where weight, freight and fit-out speed decide the specification. The core is a 35 kg/m³ polyurethane block, CNC-cut into five ergonomic zones with open air channels across the surface. It compresses further than a spring mattress, so the container count per shipment is the highest in the range — the model to price against imported volume supply.

- 35 KG/M³ CORE
- 5 ZONE CNC CUT
- CENTRE ZIP
- BEST CONTAINER YIELD
- ROLL-PACKED

TECHNICAL SPECIFICATION

Height	20 cm
Core	CNC-cut polyurethane, 5 ergonomic zones
Core density	35 kg/m ³
Air circulation	Open channels across the cut surface
Cover	Removable knitted cover, centre zip
Design	Double-sided use
Cover fabric	Knitted Lyocell / Polyester blend
Flame retardant	FR versions on request — EN 597-1 & EN 597-2
Bed bug protection	Bed bug resistant construction

guest experience

COMFORT
WITHOUT
COMPROMISE

6 CM

VISCOGEL TOPPER

6 CM
VISCOGEL FOAM

A 6 cm gel-infused viscoelastic topper. The gel disperses the heat that conventional memory foam traps, which is what makes visco workable in a hotel bed. Two uses in practice: lifting an existing room to a higher comfort grade without replacing the mattress, and differentiating suite rooms from standard rooms within the same specification. The cover zips off and launders with the linen cycle.

- VISCOGEL FOAM
- COOLER SLEEP
- REMOVABLE COVER
- ELASTIC STRAPS
- ROLL-PACKED

TECHNICAL SPECIFICATION

Height	6 cm
Core	Gel-infused viscoelastic foam
Thermal behaviour	Gel structure disperses body heat
Cover	Removable quilted knitted cover, perimeter zip
Fixing	Elastic corner straps
Cover fabric	Knitted Lyocell / Polyester blend
Flame retardant	FR versions on request — EN 597-1 & EN 597-2
Allergen protection	Hypoallergenic
Certification	OEKO-TEX certified
Sizes	90 / 140 / 160 / 180 / 200 × 200 cm — custom on request
Packaging	Roll-packed
Minimum order	On request

SECTION VII

CLINICARE MEDICAL LINE

Three mattresses on one waterproof platform. A four-layer laminated cover with a TPU membrane stops fluid completely while still passing water vapour, so the surface stays dry rather than hot. Washable at 90°C up to one hundred times, PVC-free, silent under movement, and built to carry the load of repositioning bedridden patients. The three models differ only in the core — the protection is the same in all of them.

MEDICAL MATTRESS

HYGIENE. SAFETY. COMFORT.

ENGINEERED FOR A HEALTHIER TOMORROW

Reliable support
for every patient.

1

Technical Fabric Cover

100% waterproof, breathable, antibacterial and PVC-free.

2

Absorbent Top Layer

Quickly wicks moisture away from the body, keeping the surface dry.

3

PU Foam Core

Designed with air passages to reduce perspiration. The design allows easy adjustment with the bed's movement.

100% WATERPROOF

Protection against
fluids and moisture

BREATHABLE

Helps prevent
heat buildup

ANTIBACTERIAL & HYPOALLERGENIC

A cleaner, safer
environment

WASHABLE UP TO 100 TIMES

At high temperatures
(90°C)

PVC-FREE

Safe for patients
and the environment

DURABLE

Built for
demanding use

SUPPORTING
BETTER CARE

CLINICARE ZONE

The highest specification of the medical line. The polyurethane core is cut into transverse blocks separated by open channels, so each block carries load independently and the mattress follows the articulation of the bed frame instead of resisting it. Air moves through the channels with every movement. Specified for long-stay wards, intensive care and any patient at pressure-injury risk.

CHANNEL-CUT CORE

FOLLOWS BED ARTICULATION

PRESSURE DISTRIBUTION

90°C WASHABLE

ROLL-PACKED

15 CM
CHANNEL-CUT CORE

TECHNICAL SPECIFICATION

Height	15 cm
Core	Channel-cut polyurethane blocks
Articulation	Independent blocks follow bed movement
Air circulation	Open channels through the full core
Absorbent layer	Ultra-absorbent top layer, dry contact surface
Barrier layer	PU base layer — zero leakage to the core
Tensile strength	Rated for repositioning bedridden patients
Customisation	Separate colours for top surface and side skirt
Cover fabric	4-layer laminated technical fabric, TPU membrane
Waterproof	100% barrier — fluids, blood, urine, moisture
Breathability	Water vapour permeable — no heat build-up
Material safety	PVC-free
Hygiene	Antibacterial & hypoallergenic
Acoustics	Silent surface — no rustling on movement
Washing	Up to 100 cycles at 90°C / 194°F
Maintenance	No ironing required
Flame retardant	FR versions on request — EN 597-1 & EN 597-2

CLINICARE FLEX

14 CM
CONVOLUTED CORE

A convoluted, egg-crate profiled core. The peaks reduce the contact area beneath the patient and the valleys between them work as air passages, which lowers both pressure concentration and surface temperature. The middle specification of the line: a measurable step up from a flat core, at general ward economics.

- CONVOLUTED CORE
- REDUCED CONTACT AREA
- AIR PASSAGES
- 90°C WASHABLE
- ROLL-PACKED

TECHNICAL SPECIFICATION

Height	14 cm
Core	Convoluted (egg-crate) profiled polyurethane
Pressure relief	Profiled peaks reduce contact area
Air circulation	Valleys between peaks act as air passages
Absorbent layer	Ultra-absorbent top layer, dry contact surface
Barrier layer	PU base layer — zero leakage to the core
Customisation	Separate colours for top surface and side skirt
Cover fabric	4-layer laminated technical fabric, TPU membrane
Waterproof	100% barrier — fluids, blood, urine, moisture
Breathability	Water vapour permeable — no heat build-up

CLINICARE BASE

12 CM
SOLID PU CORE

The entry specification, and the volume line. A solid polyurethane block under the same four-layer waterproof cover as the rest of the range: identical hygiene performance, simpler support. Written for outpatient beds, day clinics, examination couches and stock replacement, where unit price and wash durability decide the order.

- SOLID PU CORE
- VOLUME SPECIFICATION
- 90°C WASHABLE
- PVC-FREE
- ROLL-PACKED

TECHNICAL SPECIFICATION

Height	12 cm
Core	Solid polyurethane block
Application	Outpatient, day clinic, examination and stock use
Absorbent layer	Ultra-absorbent top layer, dry contact surface
Barrier layer	PU base layer — zero leakage to the core
Customisation	Separate colours for top surface and side skirt
Cover fabric	4-layer laminated technical fabric, TPU membrane
Waterproof	100% barrier — fluids, blood, urine, moisture
